The Zen of Python

Beautiful	is better than ugly.
Explicit	is better than implicit.
Simple	is better than complex.
Complex	is better than complicated.
Flat	is better than nested.
Sparse	is better than dense.
Readability	counts.
Special cases	aren't special enough to break the rules.
Although practicality	beats purity.
Errors should never pass	silently.
Unless explicitly	silenced.
In the face of ambiguity, refuse the temptation	to guess.
There should be one– and preferably only one –obvious way	to do it.
Although that way may not be obvious	at first unless you're Dutch.
Now	is better than never.
Although never is often better	than *right* now.
If the implementation is hard	to explain, it's a bad idea.
If the implementation is easy	to explain, it may be a good idea.
Namespaces	are one honking great idea – let's do more of those!
